Students in the Agro-Environmental Management programme are out to change the world. Rather than just making minor changes to existing production systems, these students are out to rethink the entire production cycle by optimising production goals as well as environmental targets. They seek to develop sustainable pathways for every level of food production, to use new technologies to comply with increased regulation, and to eliminate waste from the entire production cycle. This approach is not about maximising production – it’s about balancing production with environmental concerns.

Courses provide a strong theoretical background in subjects such as the management of border systems and the workings of the nutrient cycle. In the second year, students will have the opportunity to apply this knowledge in their thesis project.

AN IDEAL LEARNING ENVIRONMENT
Denmark, a country that produces three times as much food as it consumes, is an ideal location for studying agricultural systems. Its agricultural history and long-standing strict environmental regulations mean that students have many practical examples and a large existing body of research to draw from. Aarhus University is alone in offering this specific degree.

The programme looks at topics such as nutrient cycling and environmental management; environmental effects of various types of production; xenobiotics; use of natural resources; geographic information systems; environmental legislation and regulation; nature restoration; and climate change.

These topics are of global relevance. Combined with the considerable Danish expertise and experience in this area, this means that the degree programme attracts students from all over the world. We therefore guarantee that, as a student on the Agro-Environmental Management MSc programme, you will be challenged and stimulated at both the scientific and social levels. In the course of the programme, each student will be connected with relevant research groups in connection with project work or their thesis.

A mixture of Danish and international students provides an optimal environment for peer-to-peer learning. Danes can share their experience of working in a highly regulated industry with strong environmental protections, and international students can bring both problems and solutions from their home countries to the discussions, an opportunity that will prepare all students to work in a globalised world.

CAREERS
Graduates of this programme go on to work in advisory services, for city or regional administrations, private companies, or NGOs. They may also find careers at the UN or work in independent consulting, offering assessment services. Students who do their thesis in the context of a specific company are often offered a job there. Many students go on to earn a PhD.

ADMISSION REQUIREMENTS
Students should have a strong bachelor’s in agriculture, biology, geography, environmental science, or a similar discipline.

I chose to study at Aarhus University because I wanted to acquire in-depth knowledge of how to maintain agro-ecological systems. I am currently pursuing a PhD in the same department where I completed my master’s degree. The knowledge I gained from the course work and the master’s thesis on subsoil compaction has been of immense help to my PhD study, which also focuses on predicting soil workability and fragmentation in tillage.

PETER BILSON OBOUR
PhD student, MSc in Agro-Environmental Management, from Ghana

MSC IN AGRO-ENVIRONMENTAL MANAGEMENT*
DEVELOPING SUSTAINABLE AGROECOSYSTEMS

DEVELOPING SUSTAINABLE AGROECOSYSTEMS

A WORLD RESEARCH LEADER
Aarhus University's research in agricultural sciences is cutting-edge and puts it in the front rank of agricultural science institutions worldwide. The core areas of research are: climate and natural resources, environment and bioenergy, organic farming, food quality, farm animal production and plant production.

Sustainability is a fundamental principle. The goal is to seek solutions that contribute to environmentally and economically sustainable development of the agricultural and food industries.

IN THE RANKINGS
Agricultural sciences at Aarhus University rank ninth in the world in the 2017 US News Best Global Universities ranking. and tenth in the 2016 National Taiwan University ranking. Agriculture and Forestry at AU is ranked between 51 and 100 in the 2017 QS World University Rankings by Subject.
